General Description

The GT-1108-UB7X module series is a family of stand-alone GPS receivers featuring the high performance u-blox 7 positioning engine. These flexible and cost effective receivers offer numerous connectivity options in a miniature 11.4x8.8x2.0mm package. Their compact architecture and power and memory options make GT-1108-UB7X modules ideal for battery operated mobile devices with very strict cost and space constraints.

The 56-channel u-blox 7 positioning engine boasts a Time-To-First-Fix (TTFF) of under 1 second. The dedicated acquisition engine, with over 1 million correlators, is capable of massive parallel time/frequency space searches, enabling it to find satellites instantly. Innovative design and technology suppresses jamming sources and mitigates multipath effects, giving GT-1108-UB7X GPS receivers excellent navigation performance even in the most challenging environments.

GT-1108-UB7Xmodules are not designed for life saving or supporting devices or for aviation and should not be used in products that could in any way negatively impact the security or health of the user or third parties or that could cause damage to goods.

Applications

- LBS (Location Based Service)
- PND (Portable Navigation Device)
- Vehicle navigation system
- Mobile phone

Features

- Build on high performance, low-power u-blox7xxxchipset
- Ultra high sensitivity: -162dBm
- Extremely fast TTFFat low signal level
- Built in high gain LNA
- Low power consumption:Max 15mA@3.0V
- NMEA-0183 compliant protocol or custom protocol
- Operating voltage: 2.7V to 3.6V
- Operating temperature range:-40to85℃
- SMD type with stamp holes
- Small form factor:11.4x8.8x2.0mm
- RoHS compliant (Lead-free)

Interfaces Configuration

1.1Assisted GPS (A-GPS)

Supply of aiding information like ephemeris, almanac, rough last position and time and satellite status and an optional time synchronization signal will reduce time to first fix significantly and improve the acquisition sensitivity. GT-1108-UB7X modules support the u-blox AssistNow Online and AssistNow Offline A-GPS services8 and are OMA SUPL compliant.

1.2 SuperSense Indoor GPS

GT-1108-UB7XmodulescomewithSuperSense,providingultra-fastacquisition/reacquisition and exceptional tracking sensitivity. SuperSense enables best-in-class tracking and navigation in difficult signal environments such as urban canyons or indoor locations.

1.3 KickStart / Oscillators

An available feature is KickStart. This functionality uses a TCXO to accelerate weak signal acquisition, enabling faster start and reacquisition times. KickStart is available wit h the GT-1108-UB7X.

1.4 Protocols and interfaces

Protocol	Type
NMEA	Input/output, ASCII, 0183, 2.3 (compatible to 3.0)
UBX	Input/output, binary, u-blox proprietary

Table 3: Available protocols

GT-1108-UB7Xmodules support a number of peripheral interfaces for serial communic ation.The embedded firmware uses these interfaces according to their respective protoc ol specifications. For specific applications, the firmware also supports the connection of peripheral devices, such as external memories, to some of the interfaces.

1.5UART

GT-1108-UB7XmodulesincludeoneconfigurableUARTinterfaceforserial communication (for information about configuration see section 1.11).

1.6 Display Data Channel (DDC)

The I2C compatible DDC interface can be used either to access external devices with a serial interface (e.g. EEPROM or A/D converters) or to interface with a host CPU. It is capable of master and slave operation and communicates at a rate of <100kbit/s. GPS.

1.7Antenna

GT-1108-UB7X modules are designed for use with passive and active9 antennas.

Parameter	Specification
Antenna Type	Passive and active antenna

Active Antenna Recommendations	Minimum gain Maximum noise figure Maximum gain	15 - 20 dB (to compensate signal loss in RF cable) 1.5 dB 50 dB

The maximum noise figure should be no more than 1.5dB and output impedance is at 50 Ohm.

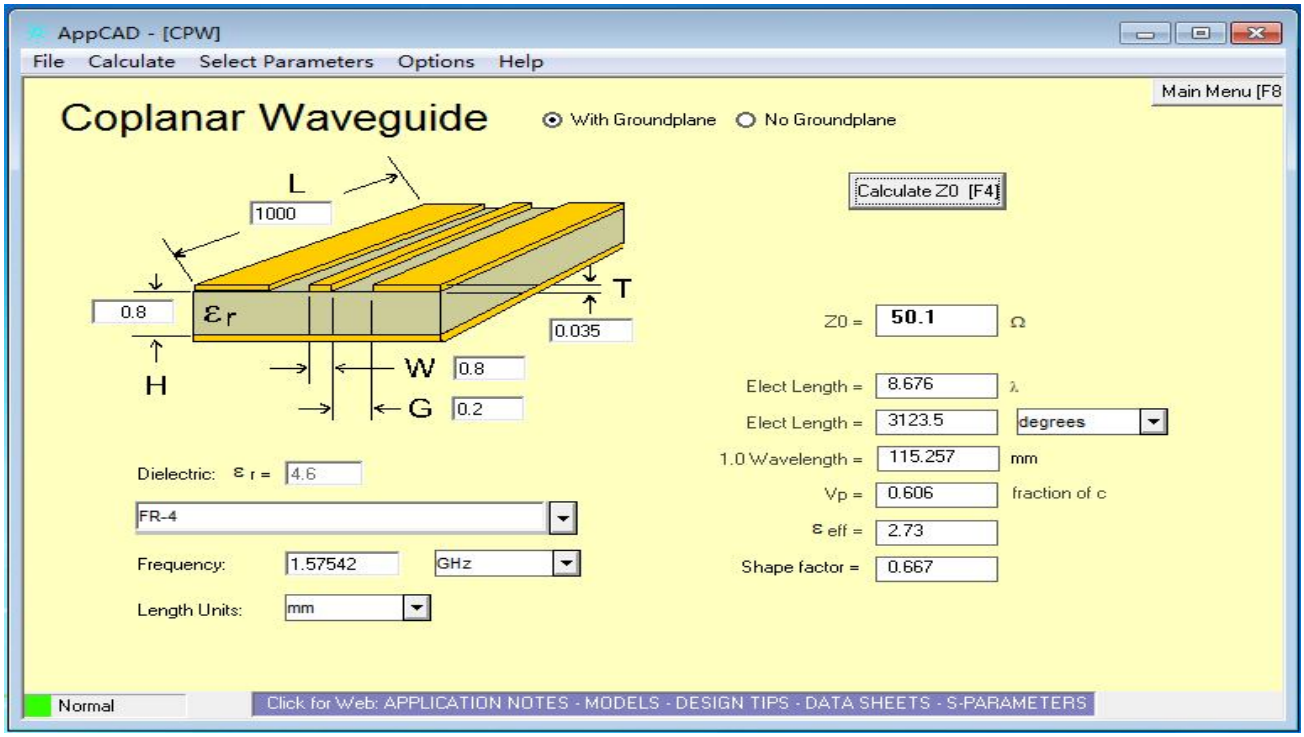

Table 5: Antenna Specifications for all GT-1108-UB7X modules

1.8Operating modes

GT-1108-UB7X modules have 2 continuous operating modes (Maximum Performance and Eco). Maximum Performance mode freely uses the acquisition engine, resulting in the best possible TTFF, while Eco mode optimizes the use of the acquisition engine to deliver lower current consumption. At medium to strong signals, there is almost no difference for acquisition and tracking performance in these modes.

1.9Maximum Performance mode

In Maximum Performance mode, u-blox 7 receivers use the acquisition engine at full performance to search for all possible satellites until the Almanac is completely downloaded.

As a consequence, tracking current consumption level will be achieved when:

A valid GPS position is fixed

Almanac is entirely downloaded

Ephemeris for all satellites in view are valid

GT-1108-UB7Xmodules allow an optional external serial EEPROM to be connected to the DDC interface.

NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a $ and with carriage return/line feed. GPS specific messages all start with $GPxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a checksum, which allows detection of corrupted data transfers.

The Gotop GT-1108-UB7Xsupports the following NMEA-0183 messages: GGA, GLL, GSA, GSV, RMC and VTG

Table 1: NMEA-0183 Output Messages

NMEA Record	DESCRIPTION
GGA	Global positioning system fixed data
GLL	Geographic position—latitude/longitude
GSA	GNSS DOP and active satellites
GSV	GNSS satellites in view
RMC	Recommended minimum specific GNSS data
VTG	Course over ground and ground speed

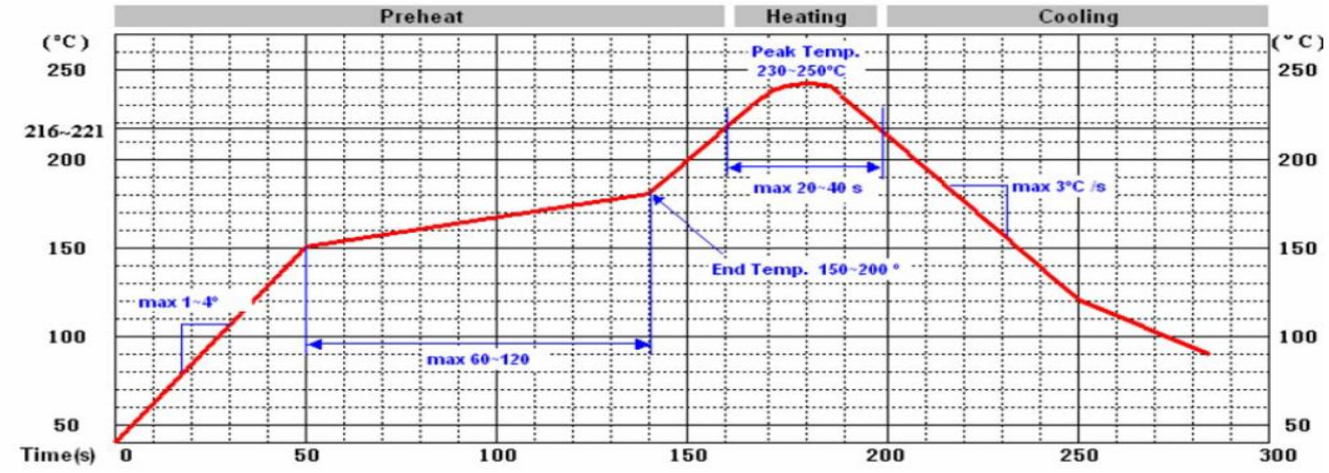
Manufacturing Process Recommendations



Note：The final soldering temperature chosen at the factory depends on additional external factors like choice ofsoldering paste，size，thickness and properties of the baseboard，etc. Exceeding the maximum soldering temperature in the recommended soldering profile may permanently damage the module.
