

General Description

The GoTop GT-4030-MTBD is a complete GPS/BeiDou engine module that features super sensitivity, ultra low power and small form factor. The GPS/BeiDou signal is applied to the antenna input of module, and a complete serial data message with position, velocity and time information is presented at the serial interface with NMEA protocol or custom protocol.

Its -165dBm tracking sensitivity extends positioning coverage into places like urban canyons and dense foliage environment where the GPS/BeiDou was not possible before. The small form factor and low power consumption make the module easy to integrate into portable devices like PNDs, mobile phones, cameras and vehicle navigation systems.

Applications

- LBS (Location Based Service)
- PND (Portable Navigation Device)
- Vehicle navigation system
- Mobile phone

Features

- Built on high performance, low-power MT3333 chipset
- Ultra high sensitivity: -165dBm
- Extremely fast TTFF at low signal level
- Built in high gain LNA
- Low power consumption: Max $20\text{mA}@3.3\text{V}$
- NMEA-0183 compliant protocol or custom protocol
- Operating voltage: 3.0V to 5.5V
- Operating temperature range: -40 to 85°C
- SMD type with stamp holes
- Small form factor: $40.0 \times 30.0 \times 4.0\text{mm}$
- RoHS compliant (Lead-free)

Interfaces Configuration

Power Supply: Regulated power for the GT-4030-MTBD is required. The input voltage Vcc should be 3.3V \pm 10%, maximum, current is no less than 20mA. Suitable decoupling must be provided by external decoupling circuitry.

Antenna: The GT-4030-MTBD GPS/BeiDou receiver is designed for supporting the active antenna or passive antenna connected with pin RF_IN. The gain of active antenna should be no less than 15dB. The maximum noise figure should be no more than 2.5dB and output impedance is at 50 Ohm.

UART Ports: The module supports two full duplex serial channels UART . All serial connections are at 3V CMOS logic levels, if need different voltage levels, use appropriate level shifters. The baud rate of both serial ports are fully programmable, the data format is however fixed: X, N, 8, 1, i.e. X baud rate, no parity, eight data bits and one stop bit, no other data formats are supported, LSB is sent first. The modules default baud rate is set up 9600bps, however, the user can change the default baud rate to any value from 4800 bps to 115kbps. UART is used e.g. for booting and NMEA interface.

AntennaSupervisor:

```

ANTSTATUS=OK( Active antenna connected and powered)
$GPTXT,01,01,02,ANTSTATUS=OK*3B;
ANTSTATUS=SHORT( Antenna short)
$GPTXT,01,01,02,ANTSTATUS=SHORT*6D;
ANTSTATUS=OPEN( Antenna not connected or antenna defective)
$GPTXT,01,01,02,ANTSTATUS=OPEN*2B;
    
```

Backup Battery Power: In case of a power failure on pin Vcc, real-time clock and backup RAM are supplied through pin VBAT. This enables the GT-4030-MTBD GPS /BeiDou Receiver to recover from power failure with either a hot start or a warm start (depending on the duration of Vcc outage). If no Backup Battery is connected, the receiver performs a cold start upon powered up.

Software Protocol

NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a \$ and with carriage return/line feed. GPS&BeiDou specific messages all start with \$GPxxx/GNxxx/BDxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a checksum, which allows detection of corrupted data transfers.

The Gotop GT-4030-MTBD supports the following NMEA-0183 messages: GGA. RMC.GSA.GLL.GSV.VTG

Manufacturing Process Recommendations

Note: The final soldering temperature chosen at the factory depends on additional external factors like choice of soldering paste, size, thickness and properties of the baseboard, etc. Exceeding the maximum soldering temperature in the recommended soldering profile may permanently damage the module.
